

LH230 Issue 2
Metal Halide 150w
Architectural

APPLICATION

This new Francis luminaire is an ideal substitute where floodlights are unable to provide the throw required to highlight certain architectural features.

Whether to be used as an uplight or downlight, this product has many uses in the illumination of buildings, statues, spires and garden features.

These are also available for use with this 150w version of lower 70w lamp. The unit can also be used in conjunction with a reeded glass in order to collimate the light, thus providing a uniform floodlit effect.

This new development provides a 300% increase in performance over the previous model offered and is easily maintained, having removable spill rings and ease of lamp replacement.
